About CockpitMax

Started by Dominik Vahala (active Boeing 737CL/NG/MAX pilot) and Vojtech Kuchar (Software/systems/flight engineer) the goal is simple, create realistic yet affordable flight simulators for public entertainment use with great attention to details.

Utilizing our experience in the industry we built our first 737NG simulator, which quickly become popular among both general public and pilots of all qualifications. Other projects quickly followed including custom helicopter simulator, F-16, Supermarine Spitfire, F/A-18 and Boeing 737MAX simulators.

We strive to offer the best simulator for the job, with custom made parts and software that enables the ease of use and maintenance. We daily operate our simulators to ensure everything works as expected even in heavy use.
